Education

- **California State University, Fullerton** – MS in Computer Engineering

- **University of California, Irvine** – BS in Software Engineering
  - Completed with a GPA of 3.671.

Listed Skills

- Python
- Node.js
- C++

- API integration
- Request processing
- Server administation

- React
- Next.js
- HTML/CSS

- Git/GitHub
- Sqlite
- MySQL

Employment

- **IT Manager and Engineering Assistant @ Professional Engineering Center** – June 2015 thru present
  - Maintaining Ubuntu file-server infrasturcture using Samba to support engineering data access.
  - Reverse-engineered and modified legacy plugins for compatibility with newer AutoCAD releases.
  - Translating sketches into production-ready structural designs for commercial and industrial projects in high-stakes industries.

- **Frontend Developer @ GameIn, UCI Capstone** – Sep 2023 thru Mar 2024
  - Implemented mobile-user-friendly pages; leveraged Next.js (and thus React) from mockups that we also made.
  - Arranged, as part of a team, a slide deck, using Figma for interface design.

Projects & Research

- **Roblox Freedom Distribution** – 2023 thru now
  - Built a full-stack Python-based bootstrapper and a client-server system for self-hosted Roblox game instances, including TCP and UDP networking, an HTTPS web server, configurable ports and automated remote-asset serialization.
  - Designed the system to support multiple software versions; the project has 150+ stars on GitHub.
  - Published detailed code-analysis guides demonstrating quirks of Roblox's software.

- **GoAnimate Wrapper** – 2019 thru 2020
  - https://github.com/GoAnimate-Wrapper/GoAnimate-Wrapper
  - Developed and maintained a Node.js API wrapper backend for Vyond's at-the-time retired Legacy Video Maker.
  - Analyzed legacy ActionScript and network logs to determine app behavior and backend requirements.
  - Implemented server-side data persistence and file-export mechanisms.
  - Managed a community-maintained project used by people seeking to continue using the legacy animation tool.

- **Webhooky** – 2018 thru 2019
  - https://github.com/Windows81/Playing-Webhooky
  - Developed a proxy to relay data from Roblox games to Discord when direct webhook activity from Roblox was blocked.
  - Used MySQL to process and store request logs.
  - Supported more than 200 distinct games throughout the project's history.
