Education

University of California, Irvine - 2020 thru 2024

- Completed a BS in Software Engineering with a GPA of 3.671.
- For a year in 2022, I participated at ACM club meetings,
 - Where I presented (at times) my solutions for *easy* and *medium* LeetCode problems to an audience of various skill levels.

Listed Skills

- MySQL
- Git; GitHub
- Android/Linux

- MongoDB
- GNU/Linux

- Next.js; React
- Bash

- Docker Compose
- PowerShell

- Python
- HTML5; CSS3

- JavaScript
- PHP

- C++

- Rust
- Roblox Lua(u)

Employment

Engineering Assistant @ Professional Engineering Center - June 2015 thru now

- Provisioned and responsible for maintaining sensitive on-site file servers with Samba, enabling secure file access for the engineering team.
- Additionally, leveraging AutoCAD to digitise drawings, which are then reviewed and analysed by a licensed civil engineer.
- Supporting the construction and repair of commercial and industrial sites by clients, including multi-national manufacturers and regional utility providers.

Raising Cane's and El Pollo Loco - Aug 2019 thru June 2021

- Communicated with customers and team members in a fast-paced environment.
- Operated drive-thru and dine-in cash registers, processing orders through the POS system and supporting overall restaurant operations.
- Helped maintain steady order throughput during peak hours.
- Salient Moment:** I resolved a customer's vehicle breakdown in the drive-thru lane by coordinating with staff and safely clearing the path, allowing service to resume promptly and preventing service delays.
- One busy evening, I noticed that a car was stuck on the path.
- Upon seeing the issue, I approached nearby drivers and asked if any had jumper cables and found one who came prepared.
- I requested that other customers yield before a shift manager transitioned to handle drive-thru orders and took over from there.

• **Bring Back Buffets** - March & April 2021

- └ <https://github.com/Windows81/Bring-Back-Bufferets>
- └ During the Covid lockdowns, I engineered a mobile web app to revive buffets whilst minimising inflection risk.
- └ This project's user-interaction model drew inspiration from how some Korean barbecue establishments operate:
 - └ Where dine-in customers can order food directly from a website they can access from their phones.
- └ I built separate user interfaces for customers, cashiers, and back-of-house staff, with step-by-step documentation for setup.
- └ Although the project is fully developed, I was unable to secure clients.

• **Rōblox Freedom Distribution** - July 2023 thru now

- └ <https://github.com/Windows81/Roblox-Freedom-Distribution>
- └ I have been developing games on Rōblox from 2013, having had an account since 2008.
- └ At the time, the company was a small Silicon-Valley start-up.
- └ Over the years, its developer-friendly tools led me to take up my current-day career as a programmer.
- └ From 2023, I've built a scalable application for users to *host* and *join* self-hosted, historic versions of Rōblox in a local- or wide-area network.
- └ Created a Python bootstrapper, dually for end users and custom back-ends, for seamless connectivity
- └ Enhanced functionality through team collaboration, code reviews, and feature development.
- └ Disclosed analysis of legal risks and benefits of various intended use cases.
